

# Advantage 2.4m, 3.0m & 3.7m

## Advantage 2.4m, 3.0m & 3.7m Line of Site Antennas

Precision Antennas has increased its range of LOS antennas to include the new low profile 2.4m 3.0m and 3.7m. The new antennas offer superior broadband performance for both single or dual polarised applications and can be supplied in Standard or High Performance configurations to give customers a wide choice.

These antennas offer a robust, durable, and cost-effective solution for point-to-point communications and are ideal for larger backbone infrastructures requiring high capacity links. This range of antennas has been designed to reduce wind-loading forces whilst still maintaining high performance. The antennas are shipped in kit form as standard to minimise shipping costs.

The antennas are provided with Precision Antennas light grey colour offering a durable, high quality paint finish as standard. Other colours may be available on request. These antennas are available directly from both our UK and Brazilian manufacturing facilities.

All of the new antennas comply with European Telecommunications Standards Institute (ETSI) standard EN300 833 and cover the frequency bands 7GHz, 13GHz and 15GHz.
